DETAILED ACTION

The Office Action is in response to the 371 of PCT/JP03/11211 filed March 3, 2005. Claims 1-7 are being examined on the merits herein.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4 and 5 provide for the use of tamsulosin, but, since the claims do not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

As such, the claims are being treated as product claims.

Furthermore, no patentable weight is given for the "intended use" of the pharmaceutical composition containing tamsulosin as recited in claims 1-3. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 4 and 5 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Probert et al. (Urology, 59 (6), 2002, pp 870-876).

Properet discloses a clinical trial using a 2 by 2 factorial design to evaluate four treatments: placebo, tamsulosin hydrochloride alone, ciprofloxacin alone, and tamsulosin hydrochloride and ciprofloxacin combined. The primary objectives of the study are to compare the efficacy and safety endpoints in patients with chronic prostatitis/ chronic pelvic pain syndrome. The study population consists of men with symptoms of discomfort or pain (Abstract; page 871, column 1, Study Design), meeting the limitations of claims 1-5.

Properet teaches that the study population consists of men with symptoms of discomfort or pain in the pelvic region (page 871, column 2, Study Population and Recruitment).

Furthermore, the reference teaches that the symptoms are characterized by pain or discomfort in the pelvic region and variable voiding symptoms. The pain can be perineal, suprapubic, testicular, and/or penile and may be associated with ejaculation or voiding. Associated voiding symptoms are irritative or obstructive in nature (similar to symptoms associated with benign prostatic hyperplasia) (page 873, column 2, lines 6-16), meeting the limitations of claims 6 and 7.

Since tamsulosin hydrochloride was administered to a patient, it meets the claims.

Conclusion

No claims are allowed.
